# Foundations of Software Fall 2022

Week 6

#### Plan

#### PREVIOUSLY:

- 1. type safety as progress and preservation
- 2. typed arithmetic expressions
- 3. simply typed lambda calculus (STLC)

#### TODAY:

- 1. Equivalence of lambda terms
- 2. Preservation for STLC
- 3. Extensions to STLC

NEXT: state, exceptions

NEXT: polymorphic (not so simple) typing

Theorem: If  $\Gamma \vdash t : T$  and  $t \longrightarrow t'$ , then  $\Gamma \vdash t' : T$ .

Proof: By induction

```
Theorem: If \Gamma \vdash t : T and t \longrightarrow t', then \Gamma \vdash t' : T.
```

*Proof:* By induction on typing derivations.

Which case is the hard one??

```
\label{eq:Theorem: If $\Gamma \vdash t : T$ and $t \longrightarrow t'$, then $\Gamma \vdash t' : T$.} Proof: \mbox{ By induction on typing derivations.} \mbox{Case $T$-APP: Given } \mbox{ } t = t_1 \mbox{ } t_2 \mbox{ } \Gamma \vdash t_1 : T_{11} {\longrightarrow} T_{12} \mbox{ } \Gamma \vdash t_2 : T_{11} \mbox{ } T_{12} \mbox{ }
```

```
Theorem: If \Gamma \vdash t : T and t \longrightarrow t', then \Gamma \vdash t' : T.

Proof: By induction on typing derivations.

Case T-APP: Given t = t_1 \ t_2
\Gamma \vdash t_1 : T_{11} \longrightarrow T_{12}
\Gamma \vdash t_2 : T_{11}
T = T_{12}
Show \Gamma \vdash t' : T_{12}
By the inversion lemma for evaluation, there are three subcases...
```

```
Theorem: If \Gamma \vdash t : T and t \longrightarrow t', then \Gamma \vdash t' : T.
Proof: By induction on typing derivations.
Case T-APP: Given t = t_1 t_2
                                  \Gamma \vdash t_1 : T_{11} \rightarrow T_{12}
                                  \Gamma \vdash t_2 : T_{11}
                                  T = T_{12}

                      Show \Gamma \vdash t' : T_{12}
By the inversion lemma for evaluation, there are three subcases...
Subcase: t_1 = \lambda x : T_{11}. t_{12}
               to a value vo
               \mathsf{t}' = [\mathsf{x} \mapsto \mathsf{v}_2] \mathsf{t}_{12}
Uh oh.
```

Lemma: Types are preserved under substitition.

That is, if  $\Gamma$ ,  $x:S \vdash t:T$  and  $\Gamma \vdash s:S$ , then  $\Gamma \vdash [x \mapsto s]t:T$ .

Lemma: Types are preserved under substitition.

```
That is, if \Gamma, x: S \vdash t : T and \Gamma \vdash s : S, then \Gamma \vdash [x \mapsto s]t : T.
```

Proof: ...

#### Weakening and Permutation

Two other lemmas will be useful.

Weakening tells us that we can *add assumptions* to the context without losing any true typing statements.

Lemma: If  $\Gamma \vdash t : T$  and  $x \notin dom(\Gamma)$ , then  $\Gamma, x : S \vdash t : T$ .

#### Weakening and Permutation

Two other lemmas will be useful.

Weakening tells us that we can *add assumptions* to the context without losing any true typing statements.

```
Lemma: If \Gamma \vdash t : T and x \notin dom(\Gamma), then \Gamma, x : S \vdash t : T.
```

Permutation tells us that the order of assumptions in (the list)  $\Gamma$  does not matter.

Lemma: If  $\Gamma \vdash t : T$  and  $\Delta$  is a permutation of  $\Gamma$ , then  $\Delta \vdash t : T$ .

#### Weakening and Permutation

Two other lemmas will be useful.

Weakening tells us that we can *add assumptions* to the context without losing any true typing statements.

```
Lemma: If \Gamma \vdash t : T and x \notin dom(\Gamma), then \Gamma, x : S \vdash t : T.
```

Moreover, the latter derivation has the same depth as the former.

Permutation tells us that the order of assumptions in (the list)  $\Gamma$  does not matter.

```
Lemma: If \Gamma \vdash t : T and \Delta is a permutation of \Gamma, then \Delta \vdash t : T.
```

Moreover, the latter derivation has the same depth as the former.

```
Lemma: If \Gamma, x:S \vdash t : T and \Gamma \vdash s : S, then \Gamma \vdash [x \mapsto s]t : T.
```

I.e., "Types are preserved under substitition."

```
Lemma: If \Gamma, x:S \vdash t:T and \Gamma \vdash s:S, then \Gamma \vdash [x \mapsto s]t:T.
```

*Proof:* By induction on the derivation of  $\Gamma$ ,  $x:S \vdash t:T$ . Proceed by cases on the final typing rule used in the derivation.

```
Lemma: If \Gamma, x:S \vdash t:T and \Gamma \vdash s:S, then \Gamma \vdash [x \mapsto s]t:T.
```

*Proof:* By induction on the derivation of  $\Gamma$ ,  $x:S \vdash t:T$ . Proceed by cases on the final typing rule used in the derivation.

```
Lemma: If \Gamma, x:S \vdash t : T and \Gamma \vdash s : S, then \Gamma \vdash [x \mapsto s]t : T.
```

*Proof:* By induction on the derivation of  $\Gamma$ ,  $x:S \vdash t:T$ . Proceed by cases on the final typing rule used in the derivation.

```
Case T-APP: \begin{array}{ccc} t=t_1 & t_2 \\ & \Gamma, \, x \colon \! S \vdash t_1 \, : \, T_2 \! \to \! T_1 \\ & \Gamma, \, x \colon \! S \vdash t_2 \, : \, T_2 \\ & T=T_1 \end{array}
```

By the induction hypothesis,  $\Gamma \vdash [\mathtt{x} \mapsto \mathtt{s}]\mathtt{t}_1 : \mathtt{T}_2 \rightarrow \mathtt{T}_1$  and  $\Gamma \vdash [\mathtt{x} \mapsto \mathtt{s}]\mathtt{t}_2 : \mathtt{T}_2$ . By T-APP,  $\Gamma \vdash [\mathtt{x} \mapsto \mathtt{s}]\mathtt{t}_1 \ [\mathtt{x} \mapsto \mathtt{s}]\mathtt{t}_2 : \mathtt{T}$ , i.e.,  $\Gamma \vdash [\mathtt{x} \mapsto \mathtt{s}](\mathtt{t}_1 \ \mathtt{t}_2) : \mathtt{T}$ .

```
Lemma: If \Gamma, x:S \vdash t : T and \Gamma \vdash s : S, then \Gamma \vdash [x \mapsto s]t : T.
```

*Proof:* By induction on the derivation of  $\Gamma$ ,  $x:S \vdash t:T$ . Proceed by cases on the final typing rule used in the derivation.

```
Case T-VAR: t = z with z:T \in (\Gamma, x:S)
```

There are two sub-cases to consider, depending on whether z is x or another variable. If z=x, then  $[x\mapsto s]z=s$ . The required result is then  $\Gamma\vdash s:S$ , which is among the assumptions of the lemma. Otherwise,  $[x\mapsto s]z=z$ , and the desired result is immediate.

Lemma: If  $\Gamma$ , x:S  $\vdash$  t : T and  $\Gamma$   $\vdash$  s : S, then  $\Gamma$   $\vdash$  [x  $\mapsto$  s]t : T.

*Proof:* By induction on the derivation of  $\Gamma$ ,  $x:S \vdash t:T$ . Proceed by cases on the final typing rule used in the derivation.

Case T-ABS: 
$$t = \lambda y : T_2 \cdot t_1$$
  $T = T_2 \rightarrow T_1$   
 $\Gamma, x : S, y : T_2 \vdash t_1 : T_1$ 

By our conventions on choice of bound variable names, we may assume  $x \neq y$  and  $y \notin FV(s)$ . Using *permutation* on the given subderivation, we obtain  $\Gamma, y:T_2, x:S \vdash t_1:T_1$ . Using *weakening* on the other given derivation ( $\Gamma \vdash s:S$ ), we obtain  $\Gamma, y:T_2 \vdash s:S$ . Now, by the induction hypothesis,  $\Gamma, y:T_2 \vdash [x \mapsto s]t_1:T_1$ . By T-ABS,  $\Gamma \vdash \lambda y:T_2$ .  $[x \mapsto s]t_1:T_2 \rightarrow T_1$ , i.e. (by the definition of substitution),  $\Gamma \vdash [x \mapsto s]\lambda y:T_2$ .  $t_1:T_2 \rightarrow T_1$ .

#### Summary: Preservation

```
Theorem: If \Gamma \vdash t : T and t \longrightarrow t', then \Gamma \vdash t' : T.
```

#### Lemmas to prove:

- Weakening
- Permutation
- Substitution preserves types
- Reduction preserves types (i.e., preservation)

#### Review: Type Systems

To define and verify a type system, you must:

- 1. Define types
- 2. Specify typing rules
- 3. Prove soundness: progress and preservation

## Two Typing Topics

#### Erasure

```
\begin{array}{lll} \textit{erase}(\texttt{x}) & = & \texttt{x} \\ \textit{erase}(\lambda \texttt{x} \colon \texttt{T}_1. \ \texttt{t}_2) & = & \lambda \texttt{x}. \ \textit{erase}(\texttt{t}_2) \\ \textit{erase}(\texttt{t}_1 \ \texttt{t}_2) & = & \textit{erase}(\texttt{t}_1) \ \textit{erase}(\texttt{t}_2) \end{array}
```

#### Intro vs. elim forms

An *introduction form* for a given type gives us a way of *constructing* elements of this type.

An *elimination form* for a type gives us a way of *using* elements of this type.

#### The Curry-Howard Correspondence

In constructive logics, a proof of P must provide evidence for P.

▶ "law of the excluded middle" —  $P \lor \neg P$  — not recognized.

A proof of  $P \wedge Q$  is a *pair* of evidence for P and evidence for Q.

A proof of  $P \supset Q$  is a *procedure* for transforming evidence for P into evidence for Q.

#### Propositions as Types

Logic	Programming languages
propositions	types
proposition $P \supset Q$	type P $ ightarrow$ Q
proposition $P \wedge Q$	type $P \times Q$
proof of proposition $P$	term t of type P
proposition $P$ is provable	type $P$ is inhabited (by some term)

#### Propositions as Types

Logic	Programming languages
propositions	types
proposition $P \supset Q$	type P→Q
proposition $P \wedge Q$	type $P \times Q$
proof of proposition $P$	term t of type P
proposition $P$ is provable	type P is inhabited (by some term)
proof simplification	evaluation
(a.k.a. "cut elimination")	

## Extensions to STLC

#### Base types

Up to now, we've formulated "base types" (e.g. Nat) by adding them to the syntax of types, extending the syntax of terms with associated constants (0) and operators (succ, etc.) and adding appropriate typing and evaluation rules. We can do this for as many base types as we like.

For more theoretical discussions (as opposed to programming) we can often ignore the term-level inhabitants of base types, and just treat these types as uninterpreted constants.

E.g., suppose B and C are some base types. Then we can ask (without knowing anything more about B or C) whether there are any types S and T such that the term

$$(\lambda f:S. \lambda g:T. f g) (\lambda x:B. x)$$

is well typed.

#### The Unit type

```
terms
        unit
                                               constant unit
                                             values
        unit
                                               constant unit
T ::= ...
                                             types
        Unit
                                               unit type
New typing rules
                                                         \Gamma \vdash t : T
                                                         (T-UNIT)
                         Γ⊢ unit : Unit
```

### Sequencing

$$\begin{array}{cccc} \mathtt{t} & ::= & ... \\ & & \mathtt{t}_1; \mathtt{t}_2 \end{array}$$

terms

#### Sequencing

$$egin{array}{c} rac{ extstyle ex$$

#### Derived forms

- ► Syntactic sugar
- Internal language vs. external (surface) language

#### Sequencing as a derived form

$$t_1; t_2 \stackrel{\text{def}}{=} (\lambda x: \text{Unit.} t_2) \ t_1$$
where  $x \notin FV(t_2)$ 

#### Equivalence of the two definitions

[board]

#### Ascription

New syntactic forms

New evaluation rules

terms ascription

Прион

 $\mathtt{v}_1 \text{ as } \mathtt{T} \longrightarrow \mathtt{v}_1$ 

(E-Ascribe)

$$\frac{\mathtt{t}_1 \longrightarrow \mathtt{t}_1'}{\mathtt{t}_1 \text{ as } \mathtt{T} \longrightarrow \mathtt{t}_1' \text{ as } \mathtt{T}}$$

(E-Ascribe1)

New typing rules

 $\Gamma \vdash t : T$ 

$$\frac{\Gamma \vdash t_1 : T}{\Gamma \vdash t_1 \text{ as } T : T}$$

(T-Ascribe)

#### Ascription as a derived form

t as 
$$T \stackrel{\text{def}}{=} (\lambda x:T. x)$$
 t

#### Let-bindings

New syntactic forms

terms let binding

New evaluation rules

$$\mathsf{t}\longrightarrow \mathsf{t}'$$

let 
$$x=v_1$$
 in  $t_2 \longrightarrow [x \mapsto v_1]t_2$  (E-LetV)

$$\frac{\mathtt{t}_1 \longrightarrow \mathtt{t}_1'}{\mathtt{let} \ \mathtt{x=t}_1 \ \mathtt{in} \ \mathtt{t}_2 \longrightarrow \mathtt{let} \ \mathtt{x=t}_1' \ \mathtt{in} \ \mathtt{t}_2} \qquad \text{(E-Let)}$$

New typing rules

$$\Gamma \vdash t : T$$

$$\frac{\Gamma \vdash \mathsf{t}_1 : \mathsf{T}_1 \qquad \Gamma, \, \mathsf{x} \colon \mathsf{T}_1 \vdash \mathsf{t}_2 : \mathsf{T}_2}{\Gamma \vdash \mathsf{let} \, \, \mathsf{x} = \mathsf{t}_1 \, \; \mathsf{in} \; \; \mathsf{t}_2 : \mathsf{T}_2} \tag{T-Let}$$

#### **Pairs**

## Evaluation rules for pairs

$$\{v_1, v_2\}.1 \longrightarrow v_1 \qquad \text{(E-PAIRBETA1)}$$

$$\{v_1, v_2\}.2 \longrightarrow v_2 \qquad \text{(E-PAIRBETA2)}$$

$$\frac{t_1 \longrightarrow t_1'}{t_1.1 \longrightarrow t_1'.1} \qquad \text{(E-PROJ1)}$$

$$\frac{t_1 \longrightarrow t_1'}{t_1.2 \longrightarrow t_1'.2} \qquad \text{(E-PROJ2)}$$

$$\frac{t_1 \longrightarrow t_1'}{\{t_1, t_2\} \longrightarrow \{t_1', t_2\}} \qquad \text{(E-PAIR1)}$$

$$\frac{t_2 \longrightarrow t_2'}{\{v_1, t_2\} \longrightarrow \{v_1, t_2'\}} \qquad \text{(E-PAIR2)}$$

#### Typing rules for pairs

$$\frac{\Gamma \vdash \mathsf{t}_1 : \mathsf{T}_1 \qquad \Gamma \vdash \mathsf{t}_2 : \mathsf{T}_2}{\Gamma \vdash \{\mathsf{t}_1, \mathsf{t}_2\} : \mathsf{T}_1 \times \mathsf{T}_2} \qquad (\text{T-Pair})$$

$$\frac{\Gamma \vdash \mathsf{t}_1 : \mathsf{T}_{11} \times \mathsf{T}_{12}}{\Gamma \vdash \mathsf{T}_{11} \times \mathsf{T}_{12}} \qquad (\text{T-ProJ1})$$

 $\Gamma \vdash t_1.1 : T_{11}$ 

$$\frac{\Gamma \vdash \mathsf{t}_1 : \mathsf{T}_{11} \times \mathsf{T}_{12}}{\Gamma \vdash \mathsf{t}_1 . 2 : \mathsf{T}_{12}} \tag{T-Proj2}$$

#### **Tuples**

#### Evaluation rules for tuples

$$\begin{cases}
\mathbf{v}_{i} \stackrel{i \in 1..n}{} \cdot \mathbf{j} \longrightarrow \mathbf{v}_{j} & \text{(E-ProjTuple)} \\
\frac{\mathbf{t}_{1} \longrightarrow \mathbf{t}_{1}'}{\mathbf{t}_{1}.\mathbf{i} \longrightarrow \mathbf{t}_{1}'.\mathbf{i}} & \text{(E-Proj)} \\
\frac{\mathbf{t}_{j} \longrightarrow \mathbf{t}_{j}'}{\{\mathbf{v}_{i} \stackrel{i \in 1..j-1}{}, \mathbf{t}_{j}, \mathbf{t}_{k} \stackrel{k \in j+1..n}{}\}} & \text{(E-Tuple)} \\
\longrightarrow \{\mathbf{v}_{i} \stackrel{i \in 1..j-1}{}, \mathbf{t}_{j}', \mathbf{t}_{k} \stackrel{k \in j+1..n}{}\}
\end{cases}$$

#### Typing rules for tuples

for each 
$$i$$
  $\Gamma \vdash t_i : T_i$ 

$$\Gamma \vdash \{t_i^{i \in I...n}\} : \{T_i^{i \in I...n}\}$$

$$\frac{\Gamma \vdash t_1 : \{T_i^{i \in I...n}\}}{\Gamma \vdash t_1 . j : T_j}$$
(T-Proj)
